== IBM SKILLSBUILD DATA ANALYTICS & AI INTERNSHIP PROJECT REPORT

Student Name : Rahul Program Name : IBM SkillsBuild Data Analytics & AI Internship
Submitted To : Edunet Foundation / AICTE / IBM SkillsBuild

1. EXECUTIVE SUMMARY

This project focuses on executing data analysis workflows using Python and leveraging Generative AI tools for insight extraction. Developed under the IBM SkillsBuild Internship framework, the primary goal is to clean raw data, run statistical analysis, and evaluate performance metrics.

1. OBJECTIVES

- Perform data cleaning and handle missing records.
- Conduct Exploratory Data Analysis (EDA) on structured datasets.
- Generate key performance metrics and summary statistics.
- Apply Python-based data visualisations and analytics workflows.

1. METHODOLOGY & WORKFLOW

- Data Ingestion: Loading dataset into Pandas DataFrame.
- Preprocessing: Filtering data, handling null values, and structure standardization.
- Exploratory Analysis: Grouping data by domain metrics and calculating averages.
- Reporting: Structuring clear outcomes and summary insights.

1. CONCLUSION

The analytical pipeline was successfully developed and executed. The project validates key concepts in Data Analytics & AI as required by the internship curriculum.
